

Central Carolina Technical College Health Sciences Center

Location: Sumter, South Carolina

The Central Carolina Technical College Health Sciences Center was a substantial addition to the region's educational resources. The project adapted a 40-year-old abandoned building into a vibrant, modern learning facility that serves four counties and three major hospitals.

The building sat vacant for more than 10 years and once served as a Western Auto and a grocery store. The space includes classrooms and seminar rooms, as well as simulation labs and mock ORs with state-of-the-art robotics and patient-simulation equipment.

The building includes a 100-seat tiered seminar room; a multi-purpose room; large divided classroom; seven regular classrooms; two instructional computer labs; a student resource computer lab; student library and lounge. Faculty, adjunct, student and building support spaces are also included.

CCTC's Health Sciences program includes a patient-simulation lab (nine stations); Associate Degree nursing lab (10 beds); Licensed Practical nurse lab (five beds); and massage therapy lab (nine stations). The Allied Health Program complements the Medical Assistant office & practice labs; phlebotomy medical & blood draw labs; and a Surgical Technician suite with two mock operating rooms and sterile processing lab. Integrated medical gases, patient headwall, medical equipment, lighting and communications provide a health care setting for training the students.
